

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

XXXVIII. *On the Use of an Amalgam of Zinc, for the Purpose of electrical Excitation, &c.* By Bryant Higgins, M. D. in a Letter to Richard Brocklesby, M. D. F. R. S.

TO DR. BROCKLESBY.

DEAR SIR,

Greek Street, Soho,  
May 8, 1778.

Read July 4, 1778. **B**Y divers experiments lately made by myself, and repeated by others, I find that, agreeable to the suggestion made in my last course of chemistry, the amalgam of zinc, which contains four times more quicksilver than zinc, is much better for electrical excitation than the tin amalgam of the ingenious Mr. CANTON, when used in the same circumstances.

I also find, that electrical cylinders are easily and effectually cleansed by applying to them a piece of the dry skin of the dog-fish whilst the cylinders are turned  
3 round;

round; and that in this method of cleansing the glass cylinders, we avoid the inconvenience of removing the cushion, and the danger of scratching the glass, to both which we are exposed in the use of whiting and other cleansing powders.

I am, &c.
